For Immediate Release

Silicon Valley, California / Budapest, Hungary — Creative Shop Music has confirmed the planned 2013 release date of a brand new concept work by composer Julius Dobos. The large-scale work in psybient / ambient - electronic style will encompass multiple album releases.

The composition and musical sound design process started in late 2009 and has been the main focus of Dobos since. The work is expected to be a reflection of Dobos' philosophy about the relationship of Nature, Life, the Universe and music, touching on such intriguing subjects as the existence and relativity of space and time – expressed in music and sound. The first release in the series, while electronic in nature, will build on an organic feel and warm textures. The ambient yet rhythmically exciting music will feature lush soundscapes, complex, out-of-this-world sounds, haunting melodies, powerful emotions, instrumentation form minimal to grandiose, traveling through seven unique sonic landscapes.

The planned 2012 release date of the new work, which was first announced last year, has been delayed due to the relocation of Julius' studio and recent teaching commitments, however the production is now at full steam at Studio CS. No further details or samples have been released, and the title of the work has not been made public either.
